

The 5-Minute **Automation Readiness** Check

Not sure if now's the right time to fix that manual process? Answer these honestly — it takes less time than making coffee.

- ☐ 1. Are you or your team spending 5+ hours a week on a manual, repetitive task — data entry, copy-pasting between tools, chasing status updates?
- ☐ 2. Have your current tools stopped talking to each other, so someone has to manually bridge the gap?
- ☐ 3. Do you have budget set aside for tooling or outside help sometime in the next 1–2 quarters?
- ☐ 4. Has this problem already cost you real time, a missed deadline, or a frustrated client in the last 6 months?
- ☐ 5. Could you describe, in one sentence, what “fixed” would actually look like?
- ☐ 6. Is there a specific person — you or someone on your team — who can actually make the call to move forward on this?
- ☐ 7. If this got solved next month, would it free up enough time or money that you'd actually notice?

Count your **Yes** answers:

0–2

Not urgent yet — bookmark this and revisit in a few months.

3–4

Worth a conversation — you're closer than you think.

5–7

You're ready. Let's talk.

No pressure, no pitch — just an honest gut check. When you're ready:
