

Aaron Nogal

AI AUTOMATION & CRM INTEGRATION SPECIALIST

Malabon, Philippines | Available through Upwork

PROFESSIONAL SUMMARY

Automation systems developer with hands-on experience designing, deploying, and testing production n8n workflows for lead intake, deterministic qualification, CRM record creation, booking handoffs, Slack notifications, AI-assisted analysis, and document delivery. Built an 18-workflow consulting operations pipeline integrating Supabase, HubSpot, Slack, Resend, Calendly, Claude through OpenRouter, and REST APIs. Strong in webhook architecture, duplicate-safe data handling, failure recovery, node-level QA, and clear technical handoff documentation.

CORE SKILLS

Automation: n8n, Zapier, workflow architecture, business process automation, lead routing, booking workflows, human approval gates

AI: Claude, OpenRouter, structured outputs, prompt workflows, AI agents, Whisper transcription, Google Gemini

Integration: REST APIs, webhooks, JSON, OAuth concepts, custom authentication, CRM integration, HubSpot, Slack, Calendly, Resend

Data and delivery: Supabase, PostgreSQL, SQL Server, Google Sheets, Cloudflare Pages, Docker, Gotenberg, Git/GitHub

Quality: acceptance criteria, node-by-node execution tracing, retry and hard-fail handling, idempotency, duplicate prevention, API response validation, technical documentation

FEATURED AUTOMATION PROJECT

Consultant Engagement Pipeline | NogalSolutions

Creator and Automation Systems Developer | 2026 | Live production system

- Designed and deployed an 18-workflow n8n system covering web-form intake, qualification, booking, CRM synchronization, discovery-call transcription, Claude analysis, human review, document generation, revision, and delivery.
- Automated lead capture into Supabase, a seven-rule qualification process, acknowledgment and booking emails, HubSpot Contact/Company/Deal creation, and Slack pipeline alerts.
- Integrated n8n with Supabase, HubSpot, Slack, Resend, Calendly, OpenRouter, Cloudflare Pages, and a self-hosted Gotenberg PDF service through APIs and webhooks.
- Generated seven linked consulting deliverables in under 10 minutes while preserving two human review gates and version-controlled revisions.
- Implemented retries, explicit failure states, Slack alerts, idempotent generation, dynamic CRM association resolution, retention controls, and daily backup monitoring.
- Verified behavior through real end-to-end executions, direct database queries, captured API responses, CRM record checks, and downstream delivery confirmation.

ADDITIONAL RELEVANT PROJECTS

Lead Management Automation System

ManyChat, Zapier, Google Forms, Google Sheets

- Built automated lead capture and qualification workflows for customer inquiries.
- Connected form and chatbot inputs to centralized lead records, reducing manual encoding.
- Mapped routing logic and automated follow-up actions across the lead journey.

AI Messenger Assistant

n8n, Meta Messenger API, Google Gemini, Webhooks

- Built a webhook-driven assistant that receives inquiries, calls an AI model, and returns automated responses.
- Implemented Meta webhook verification, structured message handling, and secure API communication.

Database-Driven Application Development

SQL Server, C#, Visual Studio, HTML, CSS

- Developed CRUD-based inventory workflows backed by a relational SQL database.
- Designed data structures and user interfaces for reliable inventory record management.

PROFESSIONAL EXPERIENCE

Automation Systems Developer | Independent / Project-Based

2025 - Present

- Translate manual business processes into maintainable workflow maps, API integrations, and review checkpoints.
- Build webhook-based automations connecting forms, databases, CRM records, messaging tools, and AI models.
- Create validation, retry, alerting, and recovery paths so failures are visible and do not silently corrupt data.
- Produce process maps, implementation specifications, test evidence, and operational handoff documentation.

EDUCATION

Bachelor of Science in Information Technology

STI College Caloocan | 2024 - 2028 expected

TRAINING

- Technical Virtual Assistants Automation Program - in progress
- n8n Workflow Automation - ongoing independent and project-based training
- AI Agent Development - ongoing training

SELECTED TECHNICAL STRENGTHS

Process mapping | Requirements clarification | API field mapping | CRM record association | Duplicate-safe upserts | Structured AI output validation | Workflow observability | Real-execution testing | Root-cause analysis | Client-ready documentation
